

Dustbuster 1 is a dust wetting additive consisting of a blend of special surfactants which increase the ability of water to wet and suppress road dust.

Dustbuster 1 is used at a very low concentration, 1 part product to 3000 parts of water. It is usually applied to the road by water bowsers or sprinkler systems. It works by reducing the surface tension of water thereby increasing the number of water droplets available to wet the road. This allows deeper penetration of the treated water into the road surface which then takes longer to dry out (at least twice as long as normal). Where water availability is critical, it suppresses dust and reduces the volume of water required.

Dustbuster 1 saves time, money and equipment. The amount of plant can be reduced, saving on manpower, diesel and other operational costs. Because less dust is generated vehicle maintenance costs will be reduced resulting in less damage to engines and filters. Watering effectiveness will improve continuously day by day & week by week !

Dustbuster 1 is biodegradable, non – hazardous, non – combustible, non – corrosive. It will not contaminate streams, vegetation, soil or harm wildlife.

Dustbuster 1 is available in 200lt drums and 1000 lt IBCs.

Saves Time, Money, Water & Equipment
